Nasopharyngeal Carcinoma

Title: Treatment of Childhood Nasopharyngeal Carcinoma with Neoadjuvant Chemotherapy and Concomitant Chemoradiotherapy. (COG ARAR0331)

Purpose: To see if a combination of chemotherapy followed by chemoradiotherapy works better at treating children with advanced NPC than the standard therapy. To see how well amifostine protects children against dry mouth when given daily before radiation therapy.

Principal Investigator: Wiley, Joseph M.

Phase: III
