

Release of Vocera Secure Texting 2.2

March 15, 2018

Vocera is pleased to announce the release of Vocera Secure Texting 2.2 for the Cloud Platform, iOS, and Android on March 20th, 2018.

For information on fixes and any known issues, please reference the respective release notes, provided below. Additional information can be found in the provided Knowledge Articles (KA), located in the [Support Portal](#).

- VST Cloud Platform [release notes](#) – KA 2301
- VST for iOS [release notes](#) – KA 2300
- VST for Android [release notes](#) – KA 2302

What's New?

Vocera Secure Text for Cloud Platform – Administrator Features

- **Security** – Any new or updated passwords will require a minimum of 8 characters for enhanced security access. Current passwords that do not meet the new minimum requirement will still be allowed.
- **Maximum Contacts** – The Secure Texting app supports a total of 10,000 combined Voice Server, Messaging Platform, and native Secure Texting contacts for increased enterprise scalability.
- **Client settings** are now saved on the server allowing them to be retrieved when a user logs into a new device for easier access.

Vocera Secure Text for iOS and Android

- **Availability** - The colored halos are now thicker for easier differentiation between statuses.
- **Maximum Contacts** – The Secure Texting app supports a total of 10,000 combined Voice Server, Messaging Platform, and native Secure Texting contacts for increased enterprise scalability.
- **Security Update** – After 5 successive failed login attempts, the system will force a 3 minute wait between each login attempt. At 10 successive failed attempts, Secure Text will lock your account. Only an admin can unlock your account to restore access to prevent unauthorized access to the application.
- **Silent Mode** – When a user is in silent mode, they will not receive any notification tones to prevent interruptions. Silent mode is when the user is in a busy or unavailable state.

- **Messaging Updates** – The ! icon will remain on the Secure Messages screen if the last message in the conversation is a high priority message for increased visibility. Also, a user can no longer use the click and hold feature to copy and forward messages (new to iOS).
- **Enhanced Attachment Updates** – When sending a photo, the Attach icon changes color to let the user know that the photo has been attached. Attachments may also be rotated for easier viewing.
- **Non Vocera Secure Texting users and all groups** will show a teal halo around their profile icon to indicate they are unavailable to text.
- **Support for Multiple Locations** – If a user is associated with multiple locations, all locations will be shown when that user is selected (new to Android). User contact details will show the organizations they belong to so the appropriate individual can be called.

What do I need to do?

Vocera Secure Texting Cloud Platform

- Be aware that the platform will be upgraded on March 20th.
- Please see release notes and reference KA 2301 in the Support Portal for more details.
