

WOUND HEALING

Title: Impact of V.A.C. Veraflo™ Therapy In Wounds Requiring Debridement Within An Orthopedic Practice

Purpose: To determine the effectiveness of V.A.C. Veraflo™ negative pressure wound therapy with Prontosan instillation, when compared to historical controls of V.A.C. Therapy without instillation in the management of wounds.

Eligibility: Inclusion Criteria:

1. Signed Informed Consent
2. Patients requiring surgical debridement for wounds with exposed hardware and/or bone, traumatic wounds, dehisced wounds, post-surgical wounds, and pressure ulcers/sores requiring debridement.
3. Age: 18 years and above
4. Subjects who will be locally available for the next 6 months.

Exclusion Criteria:

1. Wounds involving prosthetic joints.
2. Patients who are unable to adhere to scheduled study visits
3. Use of investigational agents/devices during study or within 30 days prior to enrollment
